

February 1, 2006 – Maxion Awarded R&D Contract

Maxion has been awarded a contract to develop interband cascade lasers for an application in free space optical communications. The contract will support a nine-month effort to develop high-performance, mid-infrared lasers capable of supporting high-bandwidth, optical free-space communication (FSC) links. The project will focus on improving laser performance under specific operating conditions and defining device requirements under a variety of FSC link conditions.
